

Industries & Products

Industries currently involved in include the following but is not limited to:

Engineering, Automotive, Glass manufacturing, Pharmaceutical, Dentistry, Food and Wine, Medical, Chemical and Food transportation, Material science, Nano-science, Food science, Liquor manufacturing & distribution, Telecommunications, Polymer manufacturing, Aerospace (Advanced manufacturing), Military technology, Cosmetics, Health & Safety, Mining to only name a few.

Specific projects include the following but are not limited to:

Determination of particle size distribution, Identification of floaters/specks/foreign objects within a product, Glass analysis, Asbestos testing, Material/ membrane Autopsy, Product micro-defects/failures, Multi-phase structure analysis, Fracture mechanisms, Medical devices, Car part failure analysis, Process engineering, Electronic and Electrical engineering and manufacturing, Water purification, Industrial hygiene, Dust analysis, Production and Distribution of wine/spirits/beverages, Rope Analysis, Paint and coatings, Analytical consulting, Packaging, Breathalyzers, Scaling inside pipes, Process mineralogy, Mineral chemistry, Sensors and a host of other analysis can be done.

With the latest equipment we are able to offer the most comprehensive range of analysis to meet all your requirements.
